

Synology USB Station

A 3-in-1 SOHO Server

Most economic way to share DATA and PRINTERS over the Network

- USB Disk and USB Printer sharing
- FTP Support for Windows users and Mac users
- Intuitive Setup Wizard for Windows users and Mac users
- Share Level Access Control
- Web-based Management UI
- Front-panel LED Indicators for LAN, USB disk, and Power.
- Multilingual Support
- Firmware Update

USB Disk and USB Printer Sharing

Synology USB Station is a cost-effective network server. It turns a USB storage device into network attached storage. Users can use the device for storing and sharing data, music, and photos. Besides, it shares USB printer over the network as a printer server. Synology USB Station delivers the freedom for SOHO users and home users to share resources easily while keeping privacy by access control.

FTP Support and Share-Level Access Control

FTP support allows users to access files over Internet. Share-level access control makes file sharing more flexible. The intuitive web UI assists non-IT-professional users to easily install it in a very simple way.

Cross-Platform Support

Both USB disk and USB printer can be shared among Windows users and Mac users. The Synology USB Station Setup Utility helps users setup the network related information with only few clicks, and it comes in Windows version and Mac version.

Easy Management

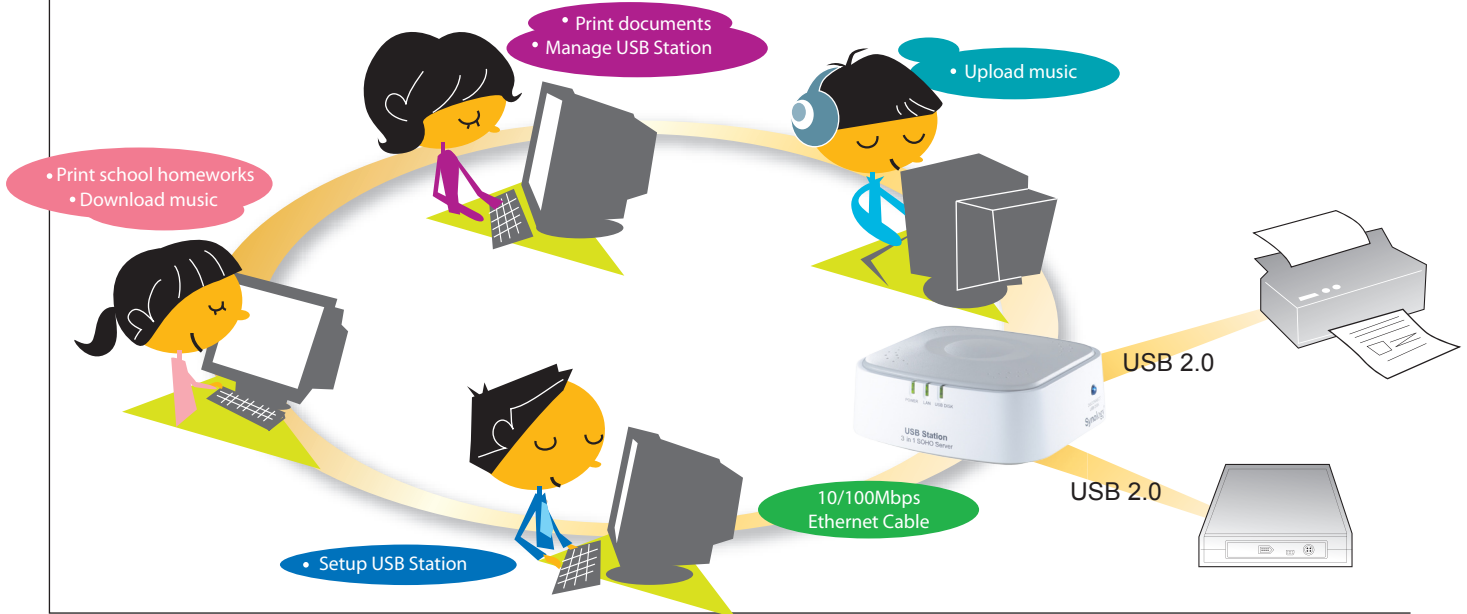

Synology USB Station provides wizard setup utility to quickly initialize the device. Administrator can log in to the management UI and change system configurations by using a web browser. The Add Printer Wizard simplifies the printer setup that usually takes complicated steps in most printer server products.

Additional PC Backup Tool

The USB disk attached to Synology USB Station can act as a backup target. After installing Synology Data Replicator II and select folders to be monitored, automatic backup mechanism will start working.
